Revised 406

PEM[®] CONCEALED-HEAD STUDS* AND STANDOFFS

These studs and standoffs ensure permanent mounting in metal sheets as thin as .062 in. / 1.6 mm.

The fastener head is locked securely in a blind, milled hole and is able to handle substantial loads. The concealed-head feature allows the side of the sheet opposite installation to remain smooth.

Sheet preparation only requires a milled blind hole to the recommended minimum depth. Center-cutting end mills for hole preparation are available from PennEngineering. Installation of the concealed-head studs and standoffs is simple using a hollow punch and solid anvil. Place the head of the fastener in the hole and insert using any standard press. Displaced sheet metal flows smoothly around the head into the undercut.

** Some PEM[®] self-clinching concealed-head studs meet NASM63540 specifications. For a complete Military Specification and National Aerospace Standards Reference Guide (Bulletin NASM) consult our Marketing Department or check our web site.*

Part Number Designation

Concealed-head Stud

Concealed-head Standoff

ALUMINUM AND STAINLESS STEEL STUDS TYPES CHA, CFHA, CHC, CFHC

- (1) Blind mounting holes may be deeper than minimums except where sheet material is at or near minimum thickness. Fasteners should always be installed so the flange is flush with the surface of the sheet.
 - (2) For shorter standoff lengths, when "L" is less than "T", minimum thread depth will be equal to "L". Screws with lengths exceeding "L" should not be used for they may cause "jacking-out" of standoff from the sheet.
 - (3) Type CSS and CSOS are blind at hex end.
 - (4) If standoff is used as a bushing, the hole in attached part must not exceed "B" plus .020" / 0.51 mm.
 - (5) Type CSOS is blind at hex end.
- NS Not stocked. Available on special order.

- (1) The installation and pullout values reported are averages when all installation specifications and procedures are followed. Variations in mounting hole size, sheet material and installation procedure will affect this data. Performance testing of this product in your application is recommended. We will be happy to provide samples for this purpose.
- (2) Not applicable.

INSTALLATION

1. Mill a blind hole to the correct minimum depth.*
2. Place fastener into anvil hole.
3. Place the sheet over the shank of the fastener.
4. With punch and anvil surfaces parallel, apply squeezing force until flange is flush with mounting sheet.

*End mills available from PennEngineering. See chart below.

END MILL DESIGNATIONS

Double-ended, two-flute H.S.S. center-cutting end mills are available from stock.

PennEngineering does not manufacture center-cutting end mills, but we do keep a supply in stock for your convenience.
